

TOMY GACHA

New products from Tomy Gacha for 2011 will include licensed toys such as Harry Potter, Hello Kitty, Disney characters including Tinkerbell and the Princesses as well as Nickelodeon characters SpongeBob SquarePants, Hannah Montana and Dora the Explorer.

COTTON CANDY VENDING

INTERMATIC will be present its latest version of the popular Candy Floss Vending machine, launched at the recent IAAPA Orlando exhibition. Now using the MEI 2700 bank note recycler which has the ability to give exact change in bills and coins, the machine continues to prove itself in many varied markets worldwide because of its long term earnings stability, the popularity of the end product and the diverse customer base. This model also incorporates a patented, fully automatic bowl cleaning system which extends the interval between clean-ups to 1,000 vends and will prove extremely attractive to street operators.

TOUCH FX

ADRENALINE Amusements presents its second product for the amusement market – Touch FX. Available as a regular arcade video game, the platform also offers a redemption application and a growing catalogue of games will be offered for the operator to choose from. Adrenaline's goal is to support operators in making a real investment out of TouchFX by continuously offering new games over time to the player. The state-of-the-art cabinet design delivers the attractive elements that entertainment centres require, including a 46ins screen, two hand multi-touch display, one to three player modes and an optimal footprint of 48ins.

NEW LICENCES

WHITEHOUSE Leisure will present more than 10 new licensed products for 2011. For the first time in Europe, Teletubbies and In the Night Garden plush toys will be available as will several film related plush toys headed by the Smurfs and the Easter blockbuster Rio, as well as television favourites Wonderpets, which will be launched for the first time as well as the new collection of Garfield. There are several non-plush crane products to complement Whitehouse Leisure's collection of licensed and gift quality plush toys and its redemption prize collection has now increased to over 500 different products ranging from the lowest ticket values up to iPads.

LIFESTYLE LEISURE

LIFESTYLE Leisure, UK distributor for Simonis pool cloth, Aramith pool balls and Garlando foosball tables will present the latest ranges for all three companies in 2011. Simonis is the chosen cloth for all major tournaments and its 860 cloth is the choice of professional players and was recently used for the Mosconi Cup - pool's version of the Ryder Cup.

Aramith balls were also used in the event and Lifestyle Leisure stocks the complete range for both pool and snooker. On behalf of Garlando, Lifestyle will also present the popular Silver Olympic table in 2011.

COIN SOLUTIONS

CUMMINS Allison presents its Jetsort range of coin sorters – ranging from the high-speed M6400 and M4200 with sorting speeds of 6,000 and 3,000 coins per minute respectively, to the compact M1000 series, capable of counting up to 1,800 mixed coins per minute, the Jetsort's compatibility with industry specific software has enhanced the coin counting process

and significantly reduced the processing time. The Jetscan has also been introduced to deal with the increased number of notes that also require processing – it connects directly to the Jetsort to provide a complete cash-handling solution, or stand-alone, it has the ability to process mixed notes and is available in both a single and dual pocket version.

MEI

MEI will introduce the new SC Advance this year – the next generation product of Cashflow SC bill validator. Enhancements include an improved recognition system which provides proactive security by utilising transmissive sensors to see all the way through notes in multiple wavelengths; faster bill-to-bill speed, which upgrades the player experience and speeds up transactions to expand throughput, expanded memory, limiting part numbers and submissions by allowing more notes to be recognised in a specific release of firmware, as well as comprehensive barcode recognition that processes barcode coupons in all four directions and improves acceptance on multi-width currencies. As well as this there is an upgrade to USB 2.0, which speeds up communications with the host machine and even potentially expands functionality. Because the enhancements are localised to the acceptor head, SC Advance can work hand-in-hand with legacy Cashflow SC units already in the field.
